MyEasyFarm announces CONTRACT, its specific solution for Contractors

On the occasion of [SIMA Digital Press Day](#) on January 28, MyEasyFarm, the cloud platform for aggregating and exchanging data with agricultural equipment, announces CONTRACT, its solution specially designed for Contractors.

The collaborative version of MyEasyFarm already allows 2 or more MyEasyFarm users to collaborate in real time and exchange agricultural data, with secure control of each user's data.

The CONTRACT subscription dedicated to Contractors, allows them to

- recover the plots of farmers in which they have to perform a task,
- plan the interventions of their equipment operators and agricultural equipment,
- distribute these interventions to drivers, via the DRIVER mobile app and/or sending tasks to hardware consoles,
- track the progress of the work in real time
- receive automatically through DRIVER and/or the recovery of material data, time spent per parcel, by equipment, machine operator, quantities of inputs or harvest, any information necessary for billing their customers,
- automatically send an intervention report to each of its farming clients.

"MyEasyFarm CONTRACT brings real value to Contract managers to plan, track in real time and document their interventions. And thanks to DRIVER, machine operators easily locate plots in which to perform tasks and automatically document their work." says François THIERART, co-founder of MyEasyFarm.
